KorsIQ

High-fidelity screens: mobile and desktop

Companion to the Master Product Blueprint v1.0. Six key screens at both sizes, using the approved palette: blue, white and black, flat, with no gradients or decorative AI motifs. Every figure shown is sample content for layout only, and plan limits remain beta values.

Primary blue	Deep blue	Ink	Muted text	Light blue	Border
#2563EB	#1746A2	#111827	#5B6472	#EFF6FF	#E5E7EB

Design rules applied

Light theme first. One sans-serif family, two weights. 8 px corners. Touch targets of at least 44 px. One primary button per screen. Status always uses an icon and words. AI credits appear in Settings only. Desktop: fixed sidebar with six destinations. Mobile: bottom navigation with five (Home, Planner, Studio, Circles, Library).

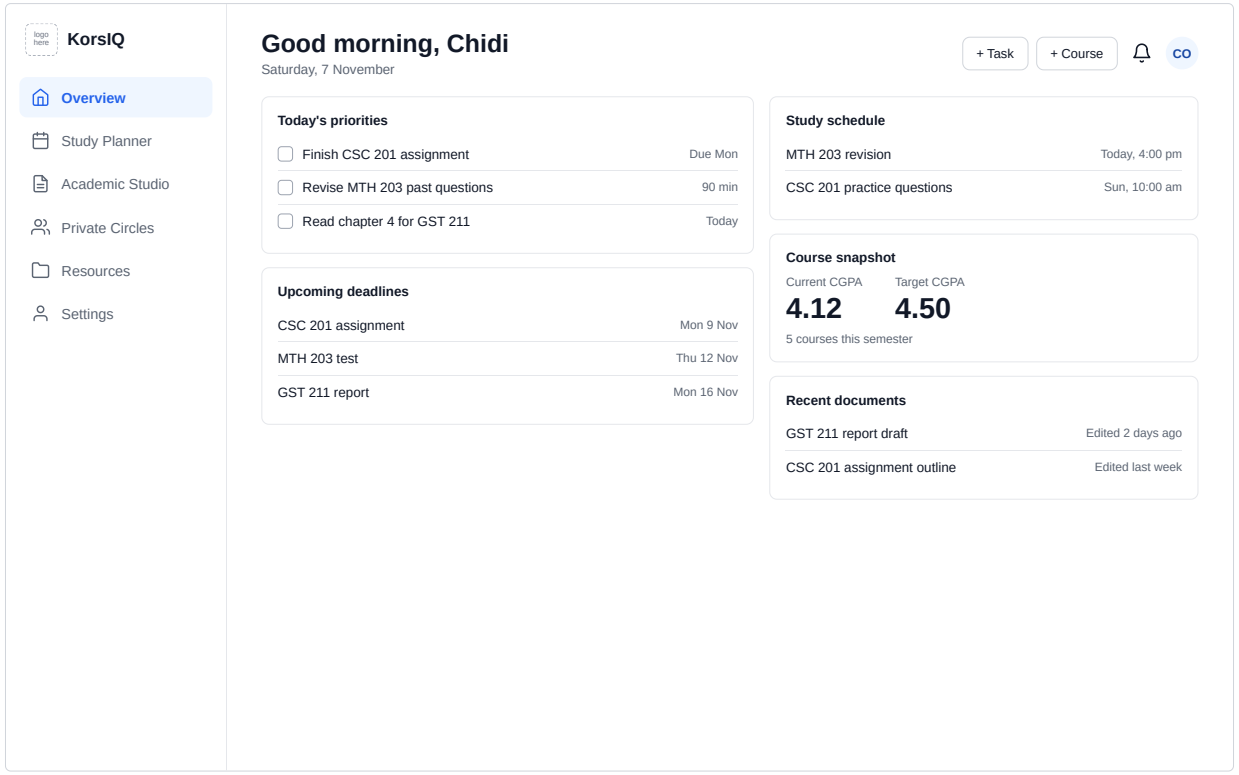

Contents

1 Dashboard · 2 Study Planner and CGPA · 3 Resources · 4 Academic Studio editor · 5 Private Circles · 6 Plan and usage · 7 Handoff notes

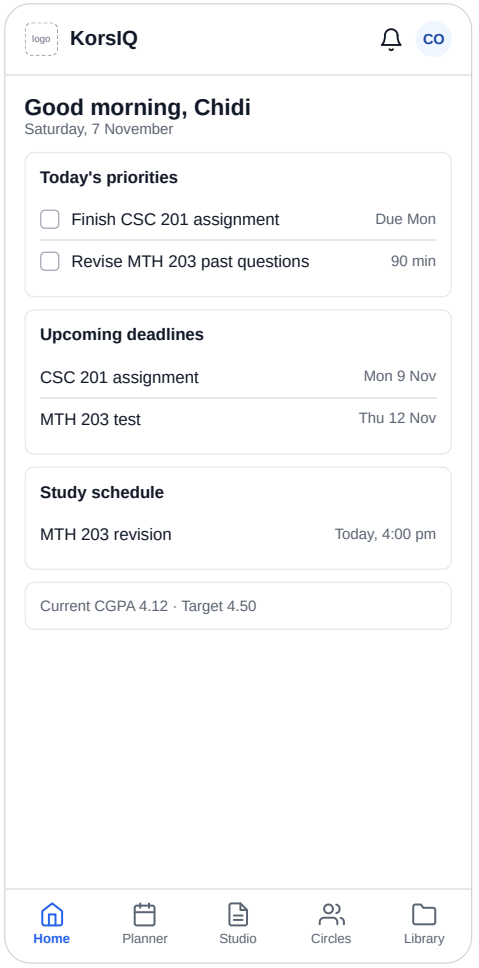

1 Dashboard

Overview: the next useful action is visible without scrolling.

DESKTOP 1280 PX

MOBILE 390 PX

Order

Greeting, priorities, deadlines, schedule, course snapshot, recent documents.

Desktop

Two columns so deadlines and the schedule sit beside priorities.

Mobile

Single column; quick actions live in the header menu of each section.

No vanity metrics

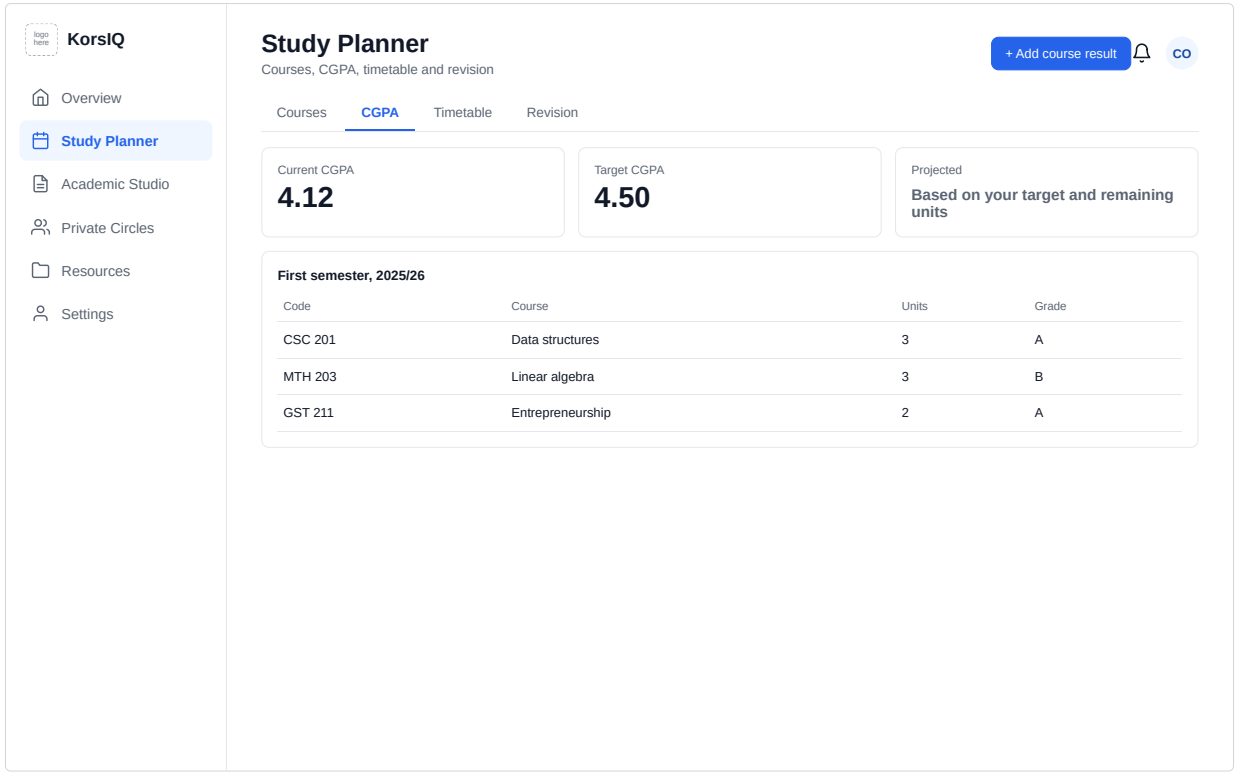

Only CGPA and course count, both from real data.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

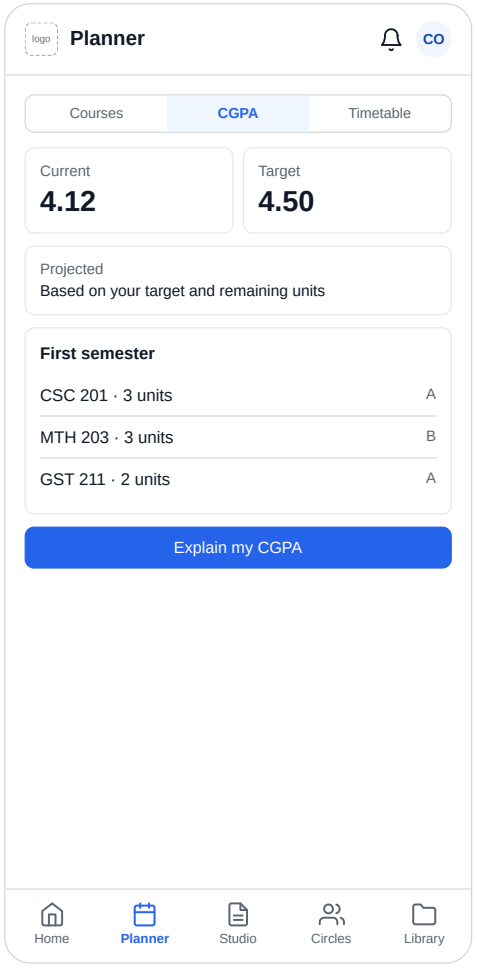

2 Study Planner and CGPA

Three separate figures. The calculation is deterministic; AI only explains it.

DESKTOP 1280 PX

MOBILE 390 PX

Separate values

Current, target and projected never share a card or a label.

Target default

Shows 0.00 until the student sets one.

AI action

Named button, not a chat bubble. Cost shows only on heavy actions.

Segmented tabs

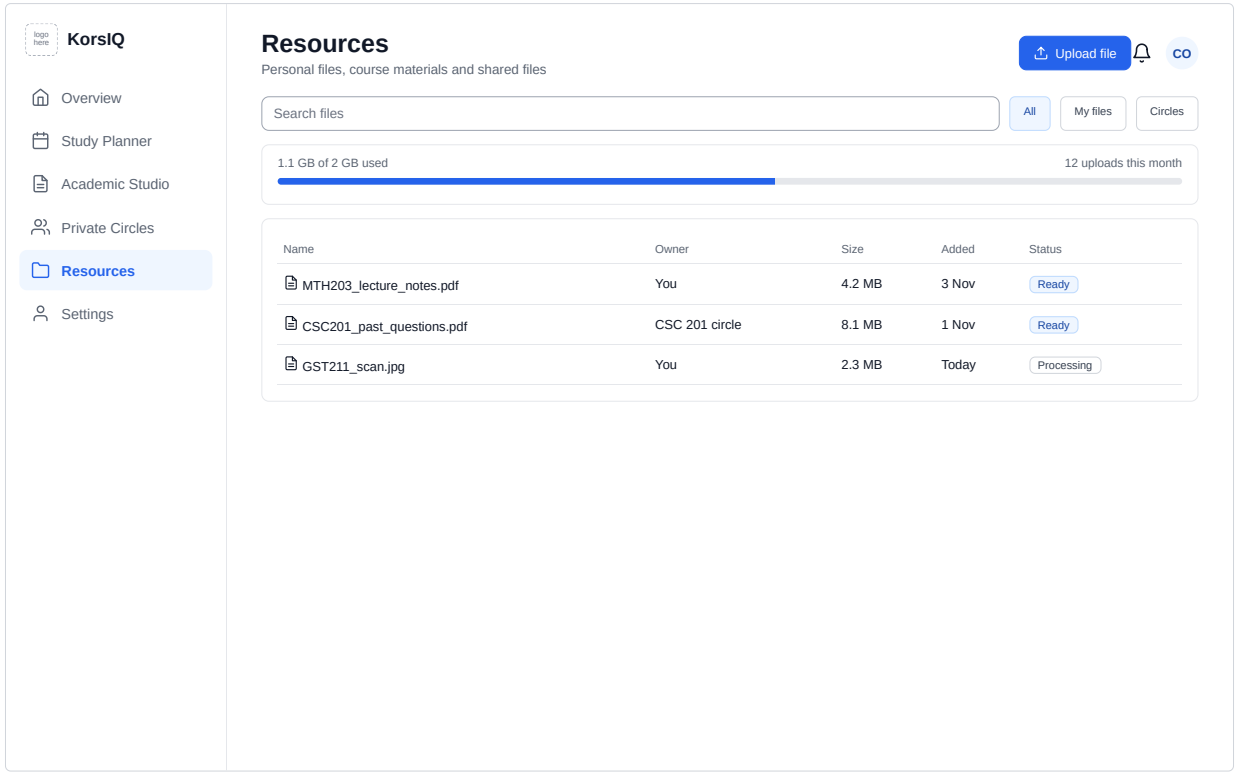

Mobile tabs shorten to three; Revision opens from the plan.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

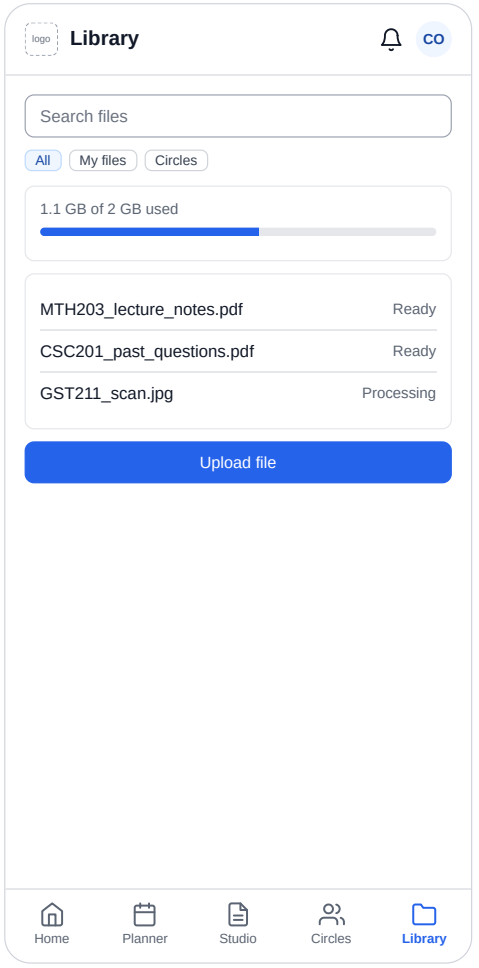

3 Resources

Library with storage use, owner, size, date and processing status.

DESKTOP 1280 PX

MOBILE 390 PX

Status

Icon-free text tags (Ready, Processing) so colour is never the only signal.

Quota

Normal state shown; the full-quota banner reuses the alert style and lists the largest files.

Upload failures

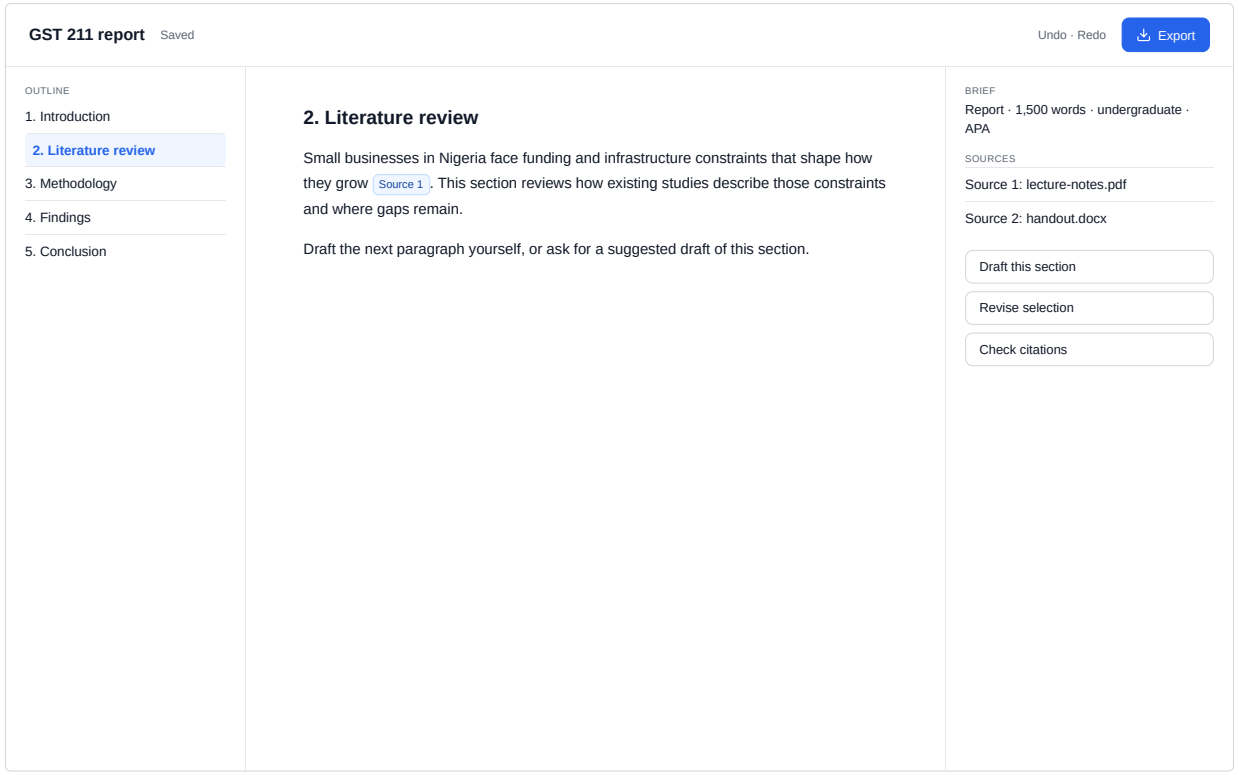

Separate messages for upload failed, details not saved, rejected file.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

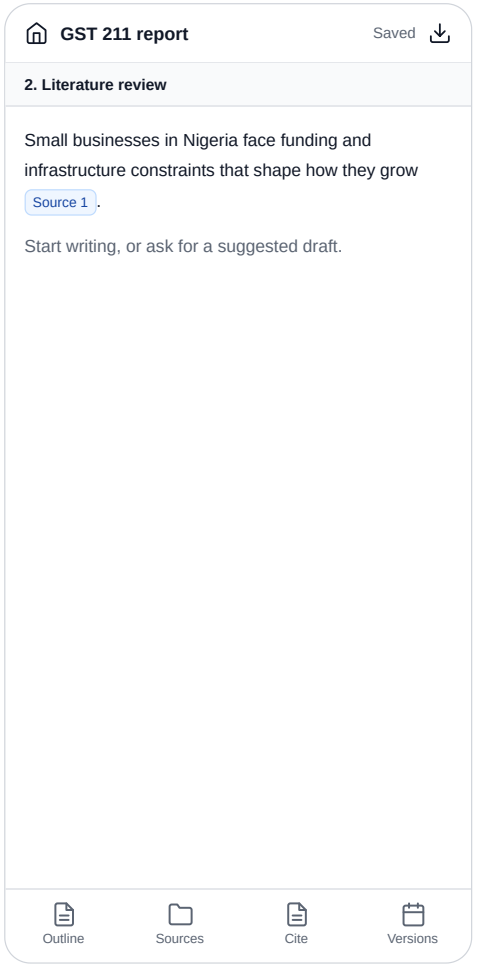

4 Academic Studio editor

Student-controlled drafting: approved outline, one section at a time.

DESKTOP 1280 PX

MOBILE 390 PX

Desktop

Outline left, canvas centre, brief and sources right; top bar holds title, save state, undo, export.

Mobile

Focused writing mode; tools open as bottom sheets.

Citations

Chips point to attached sources only, never invented references.

Plan gating

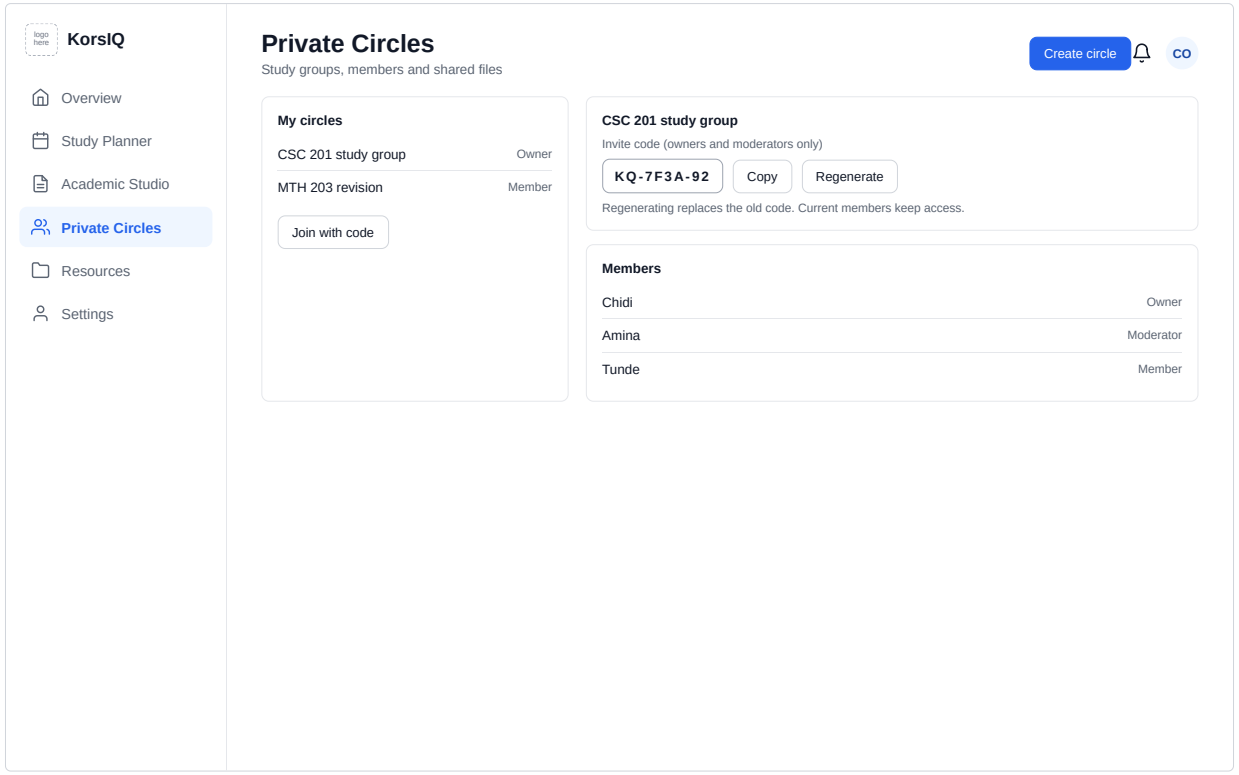

Versions and export show a quiet upgrade prompt where not included.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

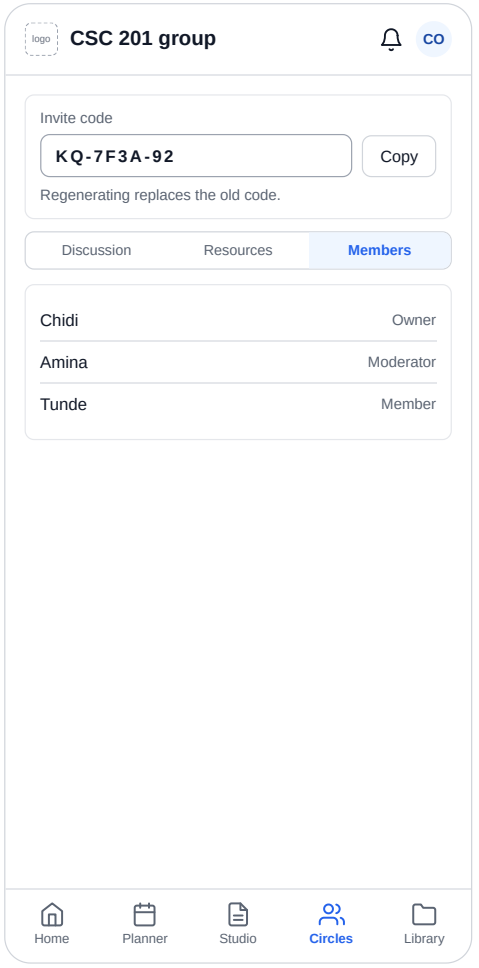

5 Private Circles

Invite codes, roles and revocation, with clear messages for every code error.

DESKTOP 1280 PX

MOBILE 390 PX

Free plan

Can join circles; Create circle shows a short Plus prompt.

Join errors

Invalid, expired, replaced and rate-limited codes each have their own message.

Removing a member

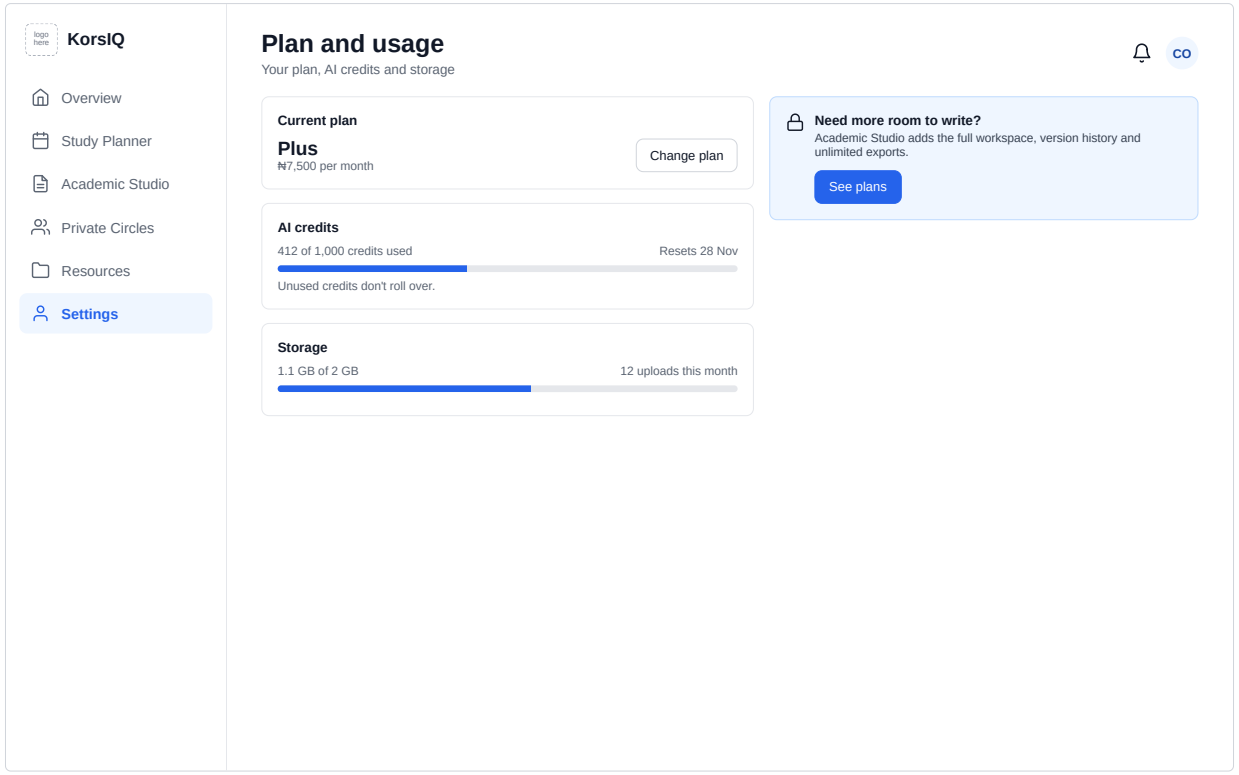

Confirms first and states that shared-file access ends.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

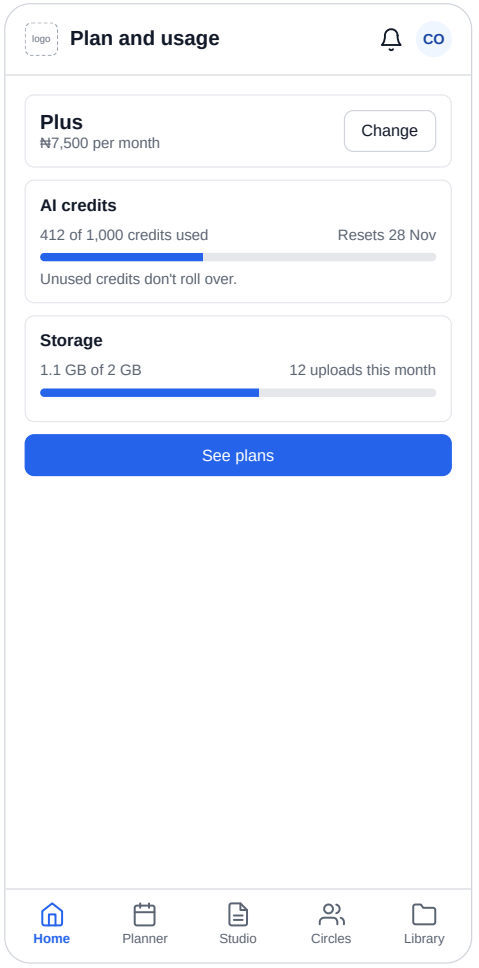

6 Plan and usage

Where AI credits live: profile menu, then Settings. Not on the dashboard.

DESKTOP 1280 PX

MOBILE 390 PX

Credit meter

Used, allowance and reset date; no rollover stated plainly.

Upgrade

One quiet card, one primary button.

Beta values

Allowances shown are placeholders until the 30-day beta review.

Sample content for layout review only. Logo shown as a placeholder: use the original asset. Not real student data.

7 Handoff notes

What engineering and design need before build.

Before building

1. Obtain the original logo and sample its exact blue; replace the placeholders. 2. Run the repository and Supabase audit (Phase 0). 3. Confirm the three proposed status colours. 4. Choose the font (a system stack is fastest on slow phones). 5. Confirm Studio boundaries per plan before any pricing page ships.

Acceptance criteria

No horizontal overflow at supported breakpoints. Visible keyboard focus. Icon-only controls have accessible names. Errors sit beside the field. Status uses icon plus words. Contrast checked on final hex values. Real loading and empty states, never fake content.

Still to design

Onboarding (four steps), locked-feature prompts, quota-reached and upload-failure sheets, Circle join errors, desktop Studio on tablet widths, empty and loading states for every screen.

Open questions

Exact limits per plan (beta). Payment provider and methods. Whether Plus gets a limited Studio. Which grading scales to seed at launch.
